

Figure 1. Passing-Bablok comparison of methods against mean Vitamin B12 values. Passing-Bablok regression analysis comparing each assay results with the consensus mean of the four immunoassay platforms. The solid blue line represents the Passing–Bablok regression line, while the dashed red lines indicate the 95% confidence intervals. The identity line ($y = x$) is shown for reference. Both axes represent Vitamin B12 concentrations expressed in pmol/L.
